

Sikafloor-2530W

Two component coloured water dispersed epoxy floor and wall coating. Provides an economical answer to reducing surface dusting whilst improving aesthetics. This type of finish can be applied to surfaces above the recommended concrete moisture levels of 75% RH (approx 5% moisture content) so is particularly useful in new build projects. Application by roller and brush - 2 coats required.

Typical Areas of Use

- Workshops
- Warehousing
- Plant Rooms

Sikafloor-264 Solvent Free High Build Epoxy Coating

Two component coloured epoxy coating offering greater dry film thickness and increased durability. Sikafloor-264 carries a high pigment level so colour and coverage are one of the best available. This product does require a concrete surface to be permanently dry (below 75%RH) and also requires an effective DPM.

Typical Areas of Use

- Workshops
- Warehousing
- Plant Rooms
- Clean Rooms

Sikafloor-262 Solvent Free Self Smoothing Screed

Three component epoxy screed providing an excellent wearing surface and a smooth, consistent finish. Applied by trowel, this system is generally applied at a nominal thickness of 2 - 3mm (though 1mm - 5mm are possible).

Typical Areas of Use

- Workshops
- Warehousing
- Plant Rooms
- Clean Rooms
- Retail Stores
- Offices
- Studios
